SKILLS

Languages : C++, C#.net, Go, Java, JavaScript, TypeScript
Development : React.js, Redux, Next.js, Node.js, Express.js, Go-Fiber, Websockets, MongoDB, PostgreSQL, SQL, Redis, Docker, Kubernetes, Kafka, CI/CD, Github Actions, Cypress, Azure, AWS

EXPERIENCE

Software Development Engineer I

GoDaddy

Jul 2025 – Present

Gurugram, Haryana

- Led the end-to-end design and implementation of Cart, Events, and automated Waitlist systems in the v2 booking platform rewrite; designed Aurora schemas and indexing strategy based on access patterns and implemented Redis-backed distributed locking with atomic transactions to guarantee zero overbooking under high concurrency.
- Architected and implemented a dynamic paywalling system across 20+ user touchpoints, introducing eligibility rules and feature flags to selectively gate premium features enabling controlled monetization experiments projecting 10% uplift in paid conversions and \$275K—\$500K annual revenue impact.
- Integrated the Appointments platform with GoDaddy's Unified Inbox by designing API contracts and building cross-service onboarding workflows to enable service sharing and custom offerings; drove +258% service-sharing adoption, +8% onboarding lift, and \$4.3M GPV impact.
- Reduced P95 latency by 2s by deduplicating 7+ redundant API calls, shifting sorting/filtering client-side, and parallelizing independent API requests to eliminate waterfall bottlenecks in critical booking flows.
- Reduced checkout friction by 35% by clearly surfacing real-time pricing in checkout flows, resulting in +14% conversion, +15% AOV, and multi-million-dollar revenue impact for our customers.
- Enabled cost-neutral cross-browser testing by integrating additional browsers into CI pipelines, increasing browser coverage by 50% and reducing browser-specific regressions by 25–35%.

Software Development Engineer Intern

GoDaddy

Jan 2025 – Jul 2025

Gurugram, Haryana

- Drove platform enhancements that simplified onboarding and improved cross-product discovery, resulting in an ~10% lift in new-user activation across the ecosystem.
- Contributed to the Coupons feature, driving early adoption (2.8k coupons applied to 6.6k bookings in 3 weeks). Identified and fixed a critical timezone bug to ensure correct coupon applicability at product launch.
- Delivered robust, production-ready code with comprehensive unit, integration and e2e tests, ensuring high reliability and low regression.
- Improved system reliability by adding real-time end-to-end monitoring, enabling early outage detection, reducing incident detection from days/hours to minutes, and improving on-call effectiveness.
- Resolved critical cross browser UI bugs impacting 40% users preventing major drop-offs in core user journeys.
- Accelerated engineering velocity by modernizing CI pipelines, achieving 6× faster execution and reduced costs.

Software Engineering Intern

Rise Higher Education

May 2023 – Oct 2023

- Built the company's core product within 6 months, single-handedly developing both the frontend and backend, driving rapid product launch, business visibility and market entry.
- Delivered secure, high-performance REST APIs with Express.js and MongoDB for authentication and data handling, leveraging Microsoft Azure for scalable deployment and secure user file storage.
- Engineered a virtual counsellor in Three.js with seamless lip-sync to audio, creating a realistic avatar experience.

PROJECTS

A* Pathfinding | Next.js, TypeScript

mrdhruv.codes/pathfinding

- This project offers an interactive visualization of the A* pathfinding algorithm, allowing users to customize grid size, obstacles, and heuristic functions to observe how they impact the algorithm's efficiency and adaptability.

C++ Trading System | C++, Websockets

mrdhruv.codes/trading_system

- Its a high-frequency trading system integrated with Deribit API, enabling ultra-low latency operations for order placement, management, and real-time market data retrieval across futures, perpetuals, and options.
- It has a scalable WebSocket server built using WebSocket++ to broadcast real-time order book updates to subscribed clients, achieving high-throughput streaming with dynamic symbol subscriptions and sub-100ms response times.

EDUCATION

USICT, Guru Gobind Singh Indraprastha University

Bachelor of Technology - Computer Science

Dec 2021 – May 2025

GPA: **9/10**

Mount Abu Public School

XII - Non Medical

2020 – 2021

92.4%

ACHIEVEMENTS

- Won the **Top 30** title out of 70,000 participants in the **Samsung Solve for Tomorrow** hackathon.
- 1200+ day problem-solving streak** on GeeksForGeeks; LeetCode **Knight** (1921).
- Amazon ML Summer School 2024 Scholar.**
