SKILLS

Languages : C++, C#.net, Go, Java, JavaScript, TypeScript
Development : React.js, Redux, Node.js, Express.js, Go-Fiber, WebSockets, PostgreSQL, MongoDB, Redis, Kafka, Docker, Kubernetes, AWS, Azure, Elasticsearch, Kibana, CI/CD

EXPERIENCE

Software Development Engineer I

GoDaddy

Jul 2025 – Present

Gurugram, Haryana

- Led the design and implementation of **Cart, Events, and automated Waitlist systems** in the v2 booking platform rewrite, designing **Aurora schemas** and **Redis-backed distributed locking** with atomic transactions to guarantee **zero overbooking** under high concurrency.
- Built **agentic capabilities** by integrating Appointments with GoDaddy Airo, enabling AI-driven business workflows.
- Architected and implemented a **dynamic paywalling system** across **20+ user touchpoints**, introducing eligibility rules and feature flags to selectively gate premium features enabling controlled monetization experiments.
- Integrated the Booking platform with GoDaddy's Unified Inbox by designing API contracts and building cross-service onboarding workflows; drove **+258%** service-sharing adoption, **+8%** onboarding lift, and **\$4.3M GPV** impact.
- Reduced **API P99 latency** from **4s** to **0.7s** and **frontend P99** by **2s** through caching redesign, lazy loading entitlements, and API deduplication, eliminating waterfall bottlenecks in critical booking flows.
- Devised and executed a recovery strategy that **restored 12K customer accounts** during a large-scale **Aurora migration incident**, resolving downstream synchronization issues across bookings, calendars, and pending events.
- Mentored interns through the end-to-end delivery of **Cronofy calendar synchronization** and **Zoom/Google Meet integrations**, providing technical guidance and support from design to production.

Software Development Engineer Intern

GoDaddy

Jan 2025 – Jul 2025

Gurugram, Haryana

- Built and delivered **Phase 2 of the Add-Ons checkout experience**, eliminating pricing surprises to reduce checkout friction by **35%**, increase order completion by **14.1%**, improve AOV by **15%**, and drive **\$2.5M aGPV** uplift.
- Improved cross-browser reliability** by resolving critical browser-specific UI issues impacting **40% of users** and enabling cost-neutral cross-browser testing, increasing coverage by **50%** and reducing regressions by **25–35%**.
- Improved system reliability by adding **real-time end-to-end monitoring**, enabling early outage detection, reducing incident detection from **days/hours** to **minutes**, and improving on-call effectiveness.
- Accelerated engineering velocity by modernizing CI pipelines, achieving **6× faster execution** and reduced costs.

Software Engineering Intern

Rise Higher Education

May 2023 – Oct 2023

Remote

- Built the v1 of the company's core product** within **6 months**, single-handedly developing both the frontend and backend, driving rapid product launch, business visibility and market entry.
- Delivered secure, high-performance REST APIs with Express.js and MongoDB for authentication and data handling, leveraging Microsoft Azure for scalable deployment and secure user file storage.
- Engineered a virtual counsellor in Three.js with **seamless lip-sync to audio**, creating a realistic avatar experience.

PROJECTS

A* Pathfinding | Next.js, TypeScript

mrdhruv.codes/pathfinding

- This project offers an interactive visualization of the A* pathfinding algorithm, allowing users to customize grid size, obstacles, and heuristic functions to observe how they impact the algorithm's efficiency and adaptability.

C++ Trading System | C++, Websockets

mrdhruv.codes/trading_system

- Built a high-frequency trading system integrating Deribit APIs for ultra-low-latency order execution and real-time market data streaming across futures, perpetuals, and options using websockets.

EDUCATION

USICT, Guru Gobind Singh Indraprastha University

Bachelor of Technology - Computer Science

Dec 2021 – May 2025

GPA: **9/10**

Mount Abu Public School

XII - Non Medical

2020 – 2021

92.4%

ACHIEVEMENTS

- Won the **Top 30** title out of 70,000 participants in the **Samsung Solve for Tomorrow** hackathon.
- 1300+ day problem-solving streak** on GeeksForGeeks; LeetCode **Knight** (1921).
- Amazon ML Summer School 2024 Scholar**.
